
Non-Hazardous Statement

TOXOIDS

The following products do not require an MSDS. Toxoids are made by chemical or genetic inactivation and are generally considered non-toxic. Toxicity is significantly decreased relative to the fully active toxins, however, some residual toxicity is expected. Toxoids have been tested and results are described in the product Certificate of Analysis.

Despite these items being non-hazardous, it is still advisable to follow prudent laboratory practices.

133L	Botulinum Neurotoxin Type A Toxoid from <i>Clostridium botulinum</i> , Liquid
